

Mohawk's Windpower Makes SMART Papers

Not only are the recently acquired SMART Papers uncoated brands still readily available, but [Mohawk Fine Papers](#) has announced that these additions to its portfolio will be manufactured using Green-e certified windpower:

Carnival
Feltweave
Genesis
Magna
Carta
Nekoosa Linen
Outback
Passport

Pegasus
Proterra
Skytone
Smart Brights
Solutions
Synergy

As the new exclusive marketer of Kromekote and Knightkote, these brands too come under the windpower umbrella. Mohawk will offset their manufacture with windpower RECs.

"We were the first U.S. mill to adopt the use of windpower. We also offer several 100 percent PCW papers. Many of our grades are FSC and Green Seal certified, and some are made carbon neutral by offsetting the thermal emissions with Verified Emission Reduction credits (VERs). With the addition of these new brands, Mohawk now carries the largest portfolio of environmental papers available anywhere," says Thomas O'Connor, Jr., chairman and chief executive officer, Mohawk Fine Papers.
